If you are looking for a new audio distribution system (speakers or headphones), you may want to check out the [Edifier MP250 Sound To Go USB Soundbar Speaker over at MEGATechReviews](#). If you want something a little more private with 5.1 support, check out the [CM Storm Sirius 5.1 Headset at HardwareLook](#). There is a chance that you want something with even more speakers, and this is when the [ROCCAT Kulo 7.1 USB headset also over at HardwareLook](#). Finally, [HardwareSecrets gives us the scoop on the Corsair Vengeance 1300 headset](#) in their latest review.

Today we look at the ROCCAT Kulo 7.1 USB headset. Audio quality is not something that most casual gamers tend to care too much about, as long as they can hear what's going on around them they are happy. Recently though there has been a renaissance in gaming audio. With more and more high quality surround sound headsets appearing on the market gamers can now hear not just what's going on around them, but where. This has meant that even casual gamers are now looking to upgrade their headsets which makes something like the ROCCAT Kulo 7.1, a product high on many people's wish lists.
