

## Chuwi LapBook Air

---

The Chuwi LapBook Air is a straight-up assault on the MacBook Air that offers some pretty impressive features for a very competitive price. The LapBook Air won't be available at Walmart or BestBuy, but it will be available online in the near future. It looks pretty impressive and I'd be very interested to see how it performs and how much it costs. It looks like it's aimed at the mid-level market with entry-level prices.
