

Gamers Have to Suck up GPU Prices

Written by Benjamin "Zeus" Heide

According to a Crypto-Rig builder, gamers just need to suck up the high prices of GPUs. The fact is that if you invest big in the mining world, you can pay off your GPU in the first year (potentially). Then, you'll end up with a flaky, heat-stressed GPU for playing video games for minutes between crashing. What a wonderful world we live in where not only can we make the money back we spend on a GPU NOT playing games, but we can also spend a ludicrous amount of money on electricity and contribute to more pollution by way of coal-fired electricity to power the system. There are a lot of reasons why mining sucks, and the cost of entry and cost of production are just a couple.

While miners look to make a profit on their expensive investment, gamers just want to have fun. That's not the tack they should be taking according to Easy Crypto Hunter's founder and Managing Director, Josh Riddett. During a sit down with Digital Trends at the London Crypto Investor show, he suggested gamers should be mining, too.
