If you're strictly a console gamer and you've been reading about the madness that is PUBG on PC (2 Million Players and growing), you may want to make sure your Xbox Live Gold subscription is paid up by December. That is when the game expands to console and at this time, it looks like it won't be available on PS4 - at all.

What separates the pair is the development cycle. PUBG has been playable on PC since March, and as such it has a nine month (at least) lead time in terms of features. "We want the same game on both platforms, but the Xbox version is obviously lagging a little bit behind when it comes to the PC version," Greene said.
