There are some solid Android phones from major companies and there are even better devices from companies that most of us have never heard of. The Gionee M6S was recently unveiled and this quite-slim beast packs in an amazing 6GB of RAM as well as a huge 6020mAh battery. That battery is larger than many USB power banks I've been given at CES. It uses a mainstream Qualcomm Snapdragon 653 processor, so you're getting battery life for days.

- Qualcomm Snapdragon 653 processor
- 6GB RAM
- 6-inch 1080p AMOLED display
- 12MP rear camera with LED flash, 8MP front-facing camera
- 64GB or 256GB of storage
- 6020mAh battery
