Good news Apple fans, in iOS 11.3 you'll get a fix to the throttling "problem"; where as your battery ages your phone slows down. Now I'm being generous saying it's a "problem" because Apple did it to user unknowingly on purpose, but regardless, by Spring 2018 you'll finally have the option to turn that off and sacrifice battery life to maintain performance. [Mashable has the story.](#)

Apple just announced iOS 11.3 (available in beta today and public release this spring) with a boatload of new features worth getting excited about.

The most notable update is the addition of a controversial power management switch that will let iPhone users turn off any performance throttling. Oh, and there's also four new Animoji for the iPhone X.
