---

The only problem with becoming a more popular browser is that people start to realize it may be worth exploiting another browser other than IE. [Secunia](#) has posted some Mozilla/Firefox/Thunderbird Vulnerabilities. The good news is that everything is already patched up in Mozilla's preview versions of their software.

[Take a look and see what's up](#)

, then

[go get the latest version](#)

and stay secure.

"Details have been released about several vulnerabilities in Mozilla, Mozilla Firefox, and Thunderbird. These can potentially be exploited by malicious people to conduct cross-site scripting attacks, access and modify sensitive information, and compromise a user's system ."
