As we wrap up the news for this warm Wednesday, we've got a few motherboard reviews that have ended up in the new bucket. The common thread this morning is the Z77 chipset. [Tech PowerUp](#) looks at the plain [ASUS P8Z77-V](#) board and gives us the scoop this boards performance. The [MSI Z77A-GD80](#) over at [TweakTown](#) is a bit flashier and it even has a Thunderbolt port. The best looking motherboard of the day goes to the [ASUS RoG Maximus V Formula Z77](#) over at [HardwareHeaven](#). This is a sweet looking motherboard and I would love to have a couple.
