---

One big limitation with VR is that you are tethered. You are tethered either by a cable to your PC, or by a designated area in which you have to remain. Wouldn't it be great if you could enjoy this solitary technology experience by wearing a computer on your back? MSI thinks so and has introduced their VR One. It's the "Best Backpack PC". I can't wait to wear it to the mall and show my friends!

*MSI unveils a breathtaking VR One powered by high-end Intel® Core i7 processor and NVIDIA® extreme level GTX 1070 graphics card. Unlike traditional VR devices, MSI VR One gets rid of the restraint from fixed VR platform. Users get to move around and enjoy VR with big movements and total immersion without worrying about accidentally unplugging the wires between the VR device and the platform. MSI VR One renders greater mobility and freedom for VR gaming.*
