There are some good things coming in the Ultra Portable PC market thanks to the power of the new Snapdragon 835 processor from Qualcomm. It appears that they are going ahead with the KS-PRO. This is a Windows 10 (full version) powered device that packs in a beautiful 8-inch 2560x1440 screen and keeps it humming with 8GB of memory, 128GB of internal storage plus a MicroSD card slot. In addition to that is pretty much everything you want and need in a computer or a phone and it's all wrapped up into one. Take a look at the link below. It's a beauty - but for \$750, it may be a bit out of my league.
