Dell is quickly pushing forward past the 4K fad and into the 8K wonder with their 31.5-inch 8K monitor. This Ultrasharp 32 is price right at that magic \$5000 mark which makes it a little more expensive than I can afford currently. Still, for that kind of money, you do get an incredible display. Thankfully, it will be shipping mid-April, so you won't have to wait long.

Of course, you probably won't plunk down that cash to use your fancy 8K monitor for high-end gaming or a VR ride. As we pointed out when we first saw it, the Ultrasharp 32's 7,680 by 4,320 pixels and 100 percent Adobe RGB and sRGB color support will most benefit artists and photographers that need to view and edit massive files.
