If you are looking for an adequate 2-in-1 device that has just enough power to make you not hate it, check out the Transformer Mini. This is a Windows 10 device that boasts an affordable 10-inch screen, Intel Atom x5 CPU, 4GB of RAM and 64 GB of internal storage. Extra storage is available via an microSD card slot. Other features include 802.11ac wireless, Bluetooth, USB 3.0, and more. All in, this device will cost you \$249 - and it comes with a keyboard, fingerprint sensor and a stylus. It's pretty tempting.
