The latest version of Roku's mini device is coming to Canada and this has a price point that is aimed squarely at the Chromecast / Home device from Google. The thing is that the Roku can do so much more - as well as offer screen sharing from your mobile device. The cost of this little wonder is a mere \$40 and it will be available very soon. It's a whole heap more powerful than the predecessor - and this will make navigation and use as smooth as previous higher-end versions.

Canada is getting a new version of the Roku Express, the company announced today. The tiny device, which is aimed at consumers new to streaming, is five times more powerful than its predecessor. It was unveiled on October 2nd as a part of Roku's refreshed lineup. It will retail for \$40 and will be available starting in November.
