HP has had their fair share of ups and downs over the past few years, but one thing they do take seriously is printer security. Before you laugh that off, think of the places that they are used - hospitals, government, financial and more. Combined with the fact that a printer is the original IoT device, this can become a pretty crazy thing. HP has released a couple of videos to demonstrate how big of a deal this can be - thanks to Christian Slater. HP is hosting a security conference next week in Toronto and we've been invited to be a part of the conference. This is YOUR chance to have a say and ask questions. If you want to ask HP a question regarding printer or other device security, [please drop us an email to our WeeklyTechUpdate account](#) (podcast (at) bcchardware (dot) com) and we'll evaluate and curate the best questions and present them next week in person - with accreditation to you!
