---

Mad Catz has had an interesting history. From being one of the premiere gaming input companies, to letting the quality slip and becoming a department store brand, to refinding themselves where they are now and once again making great products for the massive gaming market. They have three new mice that may be worth taking a look at. Ambidextrous, Lightweight and Wireless. They have all angled covered.

[B.A.T. 6+ Info](#) .

As I do more and more mobile computing and less at a desktop, my money is on the RAT DWS Wireless.
