Raspberry Pi 3 was released on February 29, and there are a few improvements that make it worth checking out. With the 64-bit processor, built-in WiFi and Bluetooth, Microsoft had to update Windows IoT for the device. The update is already available, and you can get more information and a link to the download below.

Microsoft's keen to be associated with the Pi mission of teaching computing to kiddies. But Redmond also has its own interests to advance, namely that that Windows 10 IoT Core provides hooks a-plenty to Azure, with the cloudy service offering all sorts of as-a-services that thing-makers can use to collect and crunch data.
